

Pontian

Intelligence that
works inside the
company.

A short walk through what we do and
why now.

Where AI is going

2023

Chat

A general model answers general questions. Impressive for a week. It knows nothing about your company and forgets everything when the tab closes.

2025

Copilots

Every tool got an assistant. One in email, one in the spreadsheet, one in CAD. Each helps with one task. None of them sees the whole.

NOW

Operating layer

The model became a commodity. What counts is your company's own knowledge, tied to daily work, under your rules. That is where Pontian works.

Models will keep getting better and cheaper. The edge becomes what only your company knows.

What every company has in common

The knowledge exists. It sits in folders, email, meeting minutes, spreadsheets, systems, and in the head of whoever has been there twenty years. Every new project starts the search over.

Every answer arrives with the document it came from. No permission, no view.

What Pontian builds

01 One company truth

Documents, decisions and rules in one place, with the current version and its history. What got replaced is marked as replaced.

Design standard v12 | in force since 03/2026 | replaces v11

02 Answers with sources

Anyone asks in plain language. The answer comes with the passage and the document. When the evidence does not exist, the system says it does not know.

What is the approval lead time? | 15 business days
| Contract N171, clause 4.2

03 Deadlines and team

Schedules and allocation on one screen. Deadline collisions by area, load per person, who has room.

Week 38 | Electrical: 3 deliveries | Ana: 46h of 40h

04 Automations with approval

Meeting minutes, project kickoff summaries, weekly reports. The system drafts, a person approves, everything is logged.

Minutes AR#007 ready | awaiting approval | Diego M.

05 Permissions everywhere

Each person sees what their role allows. One client never mixes with another. Every change has an author, a date, and can be undone.

Project A | Project B | no cross access

Where the value shows up

	TODAY	WITH PONTIAN
Starting a new project	Weeks of digging through folders and asking whoever remembers.	A summary ready on day one, with sources.
The same question, again	Someone answers it for the tenth time.	Answered once. Kept for the next person.
A decision made in a meeting	Stays in the recording. Nobody finds it later.	Becomes minutes in your template and enters the record.
Who is overloaded	Found out after the deadline passed.	Visible that week, per person and per project.

Where this applies

Engineering and construction

WHAT GETS LOST TODAY

Fifteen disciplines, one client, eight projects at once. The account's memory lives in veterans.

WHAT CHANGES

Each new project starts knowing what the last one learned.

Heavy infrastructure

WHAT GETS LOST TODAY

Long jobs, rotating crews, standards that change midway.

WHAT CHANGES

The current standard and the lesson from the last job arrive together, when the question is asked.

Real estate development

WHAT GETS LOST TODAY

Approvals, contracts and phases in systems that do not talk. Every development reinvents the process.

WHAT CHANGES

The approved process becomes the standard. What ran late last time is visible next time.

Agribusiness

WHAT GETS LOST TODAY

Harvest, logistics, credit and weather in separate spreadsheets, each farm its own way.

WHAT CHANGES

One read per farm per week, with the origin of every number.

Field services

WHAT GETS LOST TODAY

The owner dispatches from the truck. What he knows is written nowhere.

WHAT CHANGES

Quote, schedule and billing in one flow. The owner gets out of the truck.

Education

WHAT GETS LOST TODAY

Content scattered across rented platforms. The student does not know where they stand.

WHAT CHANGES

One platform of their own, from free to private lessons.

How we work

01 Observe

Two weeks inside the operation. Meetings by area, screen recordings of real work, a measured baseline.

02 Connect

Read-only access to the systems already in place. Nothing gets replaced, and nobody types the same thing twice.

03 Deploy

A first version in use within weeks, with a small group. Two-week sprints, a demo at the end of each.

04 Measure

Questions answered with sources, time to start a project, corrections made. All against the baseline.

05 Expand

From the pilot group to the whole department, then to the rest of the company once the numbers justify it.

06 Compound

Every correction becomes permanent knowledge. The system improves with each project, and the company keeps all of it.

- Six months to the first account in production.
- One owner on the client side.
- After that, we run and maintain it.

Who we are

A small team between Orlando and São Paulo.

GC

Gustavo Campos
Relationships and engagement

Runs the client conversation from the first coffee to the contract.

SH

Shouqi Han
Technical lead

Designs and builds the system. Accountable for what goes to production.

SR

Scott Robinson
Applied AI and engineering

Georgia Tech. Models, evaluation and answer quality.

EM

Eduardo Izawa Maciel
Software engineering, São Paulo

Inteli. Integrations and on-site presence.

FD

Felipe Dreifus
Software engineering, São Paulo

Inteli. Rollout, workflow recording and training.

Specialists join per project when the work calls for it.

09 —

Let's talk.

Thirty minutes on where your company's knowledge sits today and what could be done with it.
